

Kyoto mandated a reduction of 5.2% of anthropogenic (manmade) CO₂ based on 1990 levels.

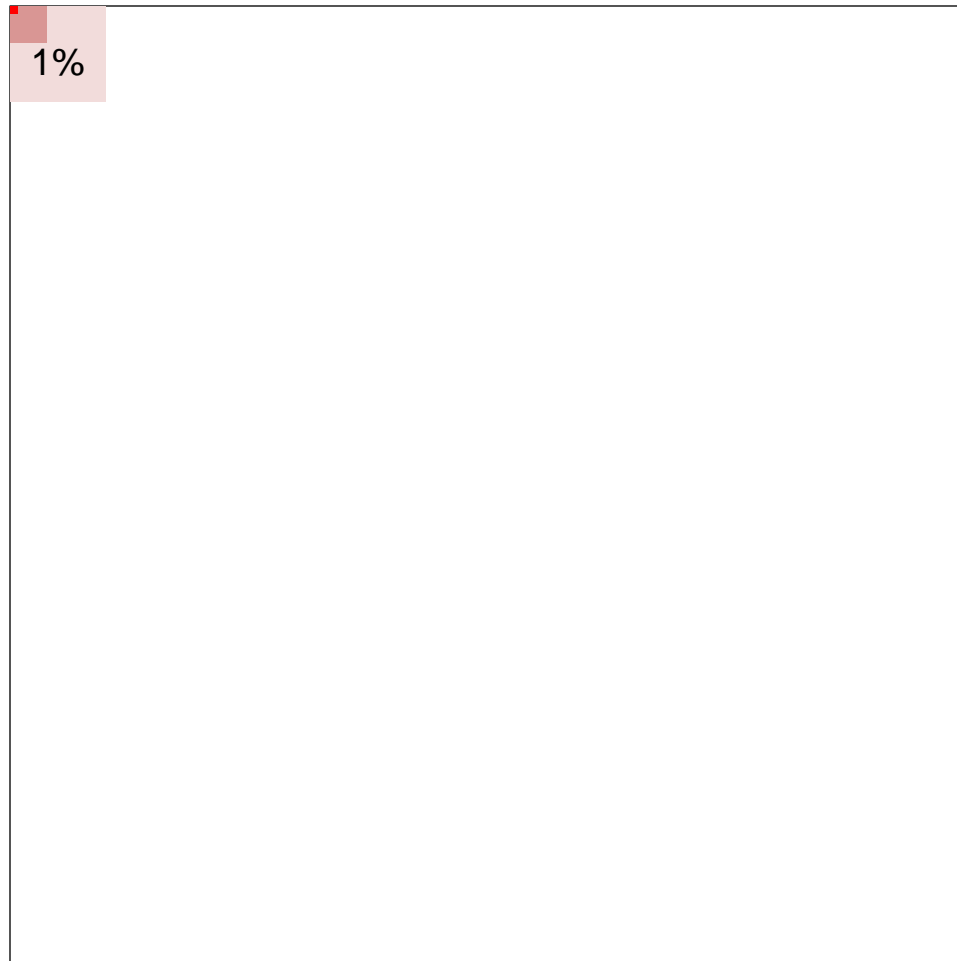

**Up to 5% of total annual CO₂ production is anthropogenic.
The remaining 95% occurs naturally.**

**About 15% of greenhouse gas is CO₂.
The rest is mostly water vapor & other gases**

**About 1% of the atmosphere is greenhouse gas.
The rest is mostly nitrogen & oxygen**

**So, man's will reduce green house gases by 0.039%...
...yet we are going to "control" climate change?**
